

Local Company Fuses Technology With Design

Kent, Washington, Jan. 1, 2009—Tilit, LLC integrates green technologies, innovation, safety, quality, and design into intelligent tiles for floors, walls, and ceilings, for use indoors and out.

Tilit pushes the tile industry to a new level by coupling the latest LED technology (light emitting diodes) with design. Natural stone tiles incorporate LEDs, which provide a safe and efficient source of light, as accent pieces of varying designs when not lighted but modernize tiles into a decorative source of light when lighted.

Available in two sizes (2"×2" and 4"×4") and numerous stone materials, colors, and patterns, the Tilit innovative illuminative tiles are watertight and install like the average tile, anywhere tiles can be installed. Use them as a backsplash/night light in the bathroom or as a baseboard to illuminate a dark hallway.

Tilit developed a light control system that includes a proximity sensor to automatically illuminate the tiles when human body is sensed or the tile is touched. All LEDs turn off after a pre-set time. An optional wireless and batteryless switch to control the illuminative tiles is also available.

Tilit's tiles will be publicly launched at the 65th Anniversary Seattle Home Show February 14-22, 2009. (Booth #522).

Additional information on illuminative tiles is available at www.Tilitusa.com.

About Tilit, LLC

Based in Kent, Washington, Tilit, LLC is an innovative company that designs and manufactures illuminative tiles. The company strives to provide customers with unique solutions to their design needs. Visit www.Tilitusa.com.
